INTRODUCTION

- **Rapid Growth of Internet Users:** Internet usage has increased dramatically worldwide, reaching approximately **6 billion users by 2025**.
- **Bangladesh is Following the Same Trend:** The number of Internet users in Bangladesh has grown sharply, reaching **over 50 million users by 2024**.
- **More Users More Digital Information:** As more people depend on the Internet for news, communication, and daily activities, the amount of information consumed online continues to increase.
- **Growing Risk of Misinformation:** This rapid expansion also increases exposure to **fake news, scams, phishing, and other misleading or malicious content**.
- **Need for Information Verification:** It is becoming increasingly important to determine whether online content is **genuine, fake, or malicious** before users act on it.
