

JS2235-C

University of Dhaka
Department of Computer Science and Engineering
PMICS (Professional Masters in Information and Cyber Security)

Guideline for the course CSE-810, Project on Cyber Security

Preamble

PMICS (Professional Masters in Information and Cyber Security) is a Professional Masters program of the Department of Computer Science and Engineering, University of Dhaka launched in July 2023. Students are enrolled in the program twice a year (January and July semesters). Students of any batch have to conduct project work related to the relevant field usually in his/her second and third semester of the program. To manage the project work successfully and efficiently, all concerned must follow an approved guideline. In this connection, the following criteria for conducting project work (CSE-810, Project on Cyber Security) are recommended by the Academic Committee of the department of Computer Science and Engineering.

1. Project Domain

The project will be related to Information and Cyber Security including (but not limited to) enterprise architecture, risk management, threat analysis, crisis management, digital forensics, security architecture, security model, security law and policy development and implementation, security compliance, information privacy, identity management, incident response, disaster recovery and business continuity planning, etc.

2. Eligibility of Project Commencement

Students who have completed at least three (3) theory courses (9 credits) are eligible for taking the project.

3. Eligibility of Project Supervision

Any faculty member of the Department of Computer Science and Engineering or any other related department of the University of Dhaka or industry personnel who are involved (or were involved in the past) as an instructor or co-instructor in the program or who meet the criteria to become an instructor or co-instructor can be a supervisor of a project.

4. Duration of the Project Completion

Two semesters are allocated for completion of a project. But for unsuccessful ones, the duration can be extended for one additional semester only; otherwise, the concerned student will

A handwritten signature in black ink, consisting of a stylized 'R' followed by a flourish.

register for the project course (CSE-810) with full tuition fees. However, the length of the degree completion requirement (Maximum 10 semesters) must be maintained.

The project will span across the second and third semesters of a regular student, carrying no credit in the second semester and 9 credits in the third semester. During the second semester, a student must chose forming a project group, propose supervisor, identify an appropriate project title and begin preliminary works (defining the problem statement, project objectives and motivation; conducting a literature review; system specifications and deliverables (in case of development works); state-of-the-art study and analysis (in case of innovative works); Gantt chart for project activity plan).

5. Project Group

Two (2) students will usually form a group to conduct a project work under an assigned supervisor. However, if the total number of project registration students in a given semester is odd, then one group may have three (3) students following the permission of the concerned examination committee. If required, groups may be formed by any two registered students in the given semester irrespective of their admission batches.

6. Project Distribution Policy

A project will be guided by a supervisor and a co-supervisor (if necessary) and at least one of them will be from the University of Dhaka. The concerned examination committee will collect the project topics from the interested project supervisors. Each group of students will submit their choice for a potential supervisor and a co-supervisor and submit their area of interest in a prescribed project proposal form to the concerned examination committee. Then the committee will match the common interest and distribute the projects. Usually, a supervisor will supervise a maximum of two (2) projects in one semester and also can act as a co-supervisor for additional two (2) projects. An eligible person can guide in the role of co-supervisor only for a maximum of 4 projects. Still, exceptions can be permitted in the absence of a sufficient number of supervisors or domain experts or other resources. The examination committee will judge the exceptional cases, make a proposal of project distribution and will get approval from the academic committee of the department.

7. Evaluation of the Project

Performances of an individual student will be evaluated by the supervisors and defense board members. However, the project report will be evaluated group-wise.

7.1 Marks Distribution:

An inception report will be submitted and presented by each group of students at the end of the second semester. For each of the projects, suggestions and recommendation will be communicated by the concern committee.

In the 3rd semester, a Mid-term Evaluation (presentation and report) will be held. At the end of the 3rd semester, a Final Evaluation will be conducted.

Prof. Dr. Md. Abdur Razzaque
Chairman
Dept. of Computer Science and Engineering
University of Dhaka, Dhaka-1000, Bangladesh

The marks will be distributed as follows:

- i. Mid-term Report and Presentation: 20 marks
- ii. Continuous Assessment: 30 marks
- iii. Final Report: 30 marks
- iv. Final Presentation: 20 marks

7.2 Continuous Evaluation: Students will meet their supervisors at least once in a week totaling 12 recorded meetings in each semester except mid and final defense. The supervisors will evaluate students based on their continuous performance and progress.

Project Mid-defense: In the middle of the third semester (at the time of 1st mid-term examination), the concerned examination committee will arrange a mid-defense with the help of the supervisor to monitor the progress of the project and allow or disallow the project to be presented at the end of the semester.

7.3 Project Defense: After the final examination of the semester is over, the students will defend their projects in front of a defense board in a prescribed time. The board/s will be formed by the examination committee for the projects allowed for that semester. The board members will be: i) supervisor and co-supervisor ii) one examination committee member iii) one PMICS program committee member and iv) an expert in the related field. A board can evaluate multiple projects in a field. The concerned examination committee will be managing the project defense tasks.

7.4 Project Report Evaluation: The project report will be evaluated by the two examiners and the general rules of the university will be applicable for the report evaluation. It is advised to distribute the project reports among the faculty members of the department, instructors and co-instructors involved in the PMICS program, and other relevant faculty members from the University of Dhaka.

8. Exception Mitigation

In case of issues/points regarding projects that have not been mentioned in this document; the PMICS conduction committee will discuss and devise solutions and implement those subjects to the approval of the Academic Committee (AC) of the department.
